Preface

DURING the period when the Nation was preparing to celebrate the 200th anniversary of American independence, the Library of Congress, a major conservator of manuscripts and documents from the American past, established a program of symposia, exhibits, and publications on the American Revolution. Among the publications planned by the Library were three annotated guides, one for each of the three principal types of original, nonbook materials in the Library's holdings from the revolutionary era—manuscripts, graphics, and maps and charts. Two of these guides, *Manuscript Sources in the Library of Congress for Research on the American Revolution* and *The American Revolution in Drawings and Prints*, were published in 1975. This comprehensive list of the maps and charts of North America and the West Indies in the Library's Geography and Map Division for the years 1750-1789 completes the trilogy.

The maps and charts described in this guide number well over two thousand different items, with easily as many or more unnumbered duplicates, many with distinct colorations and annotations. Almost six hundred maps are original manuscript drawings, a large number of which are the work of such famous map-makers as John Montrésor, Samuel Holland, Claude Joseph Sauthier, John Hills, and William Gerard De Brahm. They also include many maps from the personal collections of William Faden, Adm. Richard Howe, the comte de Rochambeau, as well as large groups of maps by three of the best eighteenth-century map publishers in London—Thomas Jefferys, William Faden, and Joseph Frederick Wallet Des Barres. Historical cartographers can even compare multiple editions, states, and impressions of several of the most important maps of the period, follow the development of a particular map from the manuscript sketch to the finished printed version and its foreign

derivatives, and examine the cartographic styles and techniques of surveyors and map-makers from six different countries—Great Britain, France, Germany, Spain, Holland, Italy, and the United States.

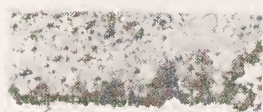

Producing a guide of this magnitude necessarily involved almost the entire staff of the Library's Geography and Map Division. Members of the Reference Section gave valuable assistance in a thorough search among the thousands of items in the division's general collections for maps from the revolutionary era. Few of these maps had been cataloged according to current Library cataloging rules, a task that was graciously assumed by the Processing Section. And finally, the deterioration of numerous maps and charts selected for the guide was brought under control through the assistance of several members of the Preservation Office staff assigned to the Geography and Map Division.

Since the plan for this guide was announced, it has received the enthusiastic support of ten distinguished historians who served on the Library's board of advisers for Bicentennial programs, and scholars in a variety of disciplines who visited the Library while the work was in progress have provided words of encouragement and advice. The ever-increasing body of geographers, historians, and historical cartographers working on the American Revolution will find this book a valuable aid in the search for a better understanding of that many-sided event.

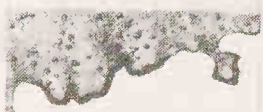

Anyone interested in examining the maps and charts described in this guide is welcome to visit the Library's Geography and Map Division. However, photographic copies of most items can be ordered through the Photoduplication Service, Library of Congress, Washington, DC 20540. Readers are also advised that items retained in other divisions of the Library are not included in this list.

J.F.W. Des Barres was one of the first mapmakers to standardize navigational symbols. The above sheet is from *The Atlantic Neptune*.

Introduction

An engraved view of a sea drama published in the early editions of *The Atlantic Neptune*, the principal maritime atlas of the American Revolution, shows a British merchant ship foundering in a storm. The vessel is careening sharply on its port side with its main mast broken. Most of its sails have been blown away, and already part of its cargo is awash. Lifeboats from two sister ships, newly arrived on the scene, are attempting to reach the stricken merchantman, but its glistening, windswept deck holds no sign of life.

In the eighteenth century such tragedies were frequently acted out in life as well as on canvas. The purpose of the engraved view in the opening pages of *The Atlantic Neptune* was to catch the attention of mariners bound for North America—who shared a common dread of shipwreck in these uncharted waters—in the hope that they would read the accompanying note. Under the caption, “Utility of the Atlantic Neptune,” the author, Joseph Frederick Wallet Des Barres, described example after example in which individual ships and entire squadrons avoided certain disaster off the American coast through the use of his charts and plans.

Unfortunately, Des Barres’s claims for the necessity of his charts were not exaggerated. Until the appearance of *The Atlantic Neptune* in 1777 (individual plates were available in increasing numbers starting in 1774), the most popular guide to navigation in North America was *The English Pilot: the Fourth Book*, a seventeenth-century sea atlas whose crude charts were reproduced throughout the eighteenth century with few corrections or improvements. In fact, the publishers of *The English Pilot* waited until 1775, when the demand for better charts of the New England coast threatened the sales of their atlas, to include more detailed charts from Cyprian Southack’s *New England Coasting Pilot*, which appeared about 1730. With few charts in the

English Pilot based on actual surveys, mariners lacked essential information on tides, currents, channels, depth of water, landmarks, and various navigational hazards such as sunken ships and submerged rocks and shoals. Remote areas like Sable Island and the Bermuda Isles became virtual graveyards for ships, and vessels reaching these shores sometimes drifted back and forth along the coast for weeks before a local pilot could bring them safely to port.

During the first half of the eighteenth century, the quality of maps of the interior parts of North America was as poor as, if not worse than, sea charts. Most such maps were drawn on a small scale, often 1:50,000,000, and they featured chiefly the major towns, harbors, and rivers, plus a few roads, trails, and frontier forts, and the hunting grounds of the principal Indian tribes. As a special attraction map publishers sometimes included gold and silver mines, though these were seldom located in areas that could be reached. Provincial and national boundaries rarely followed actual surveys. Most rivers were still uncharted and their courses misrepresented, and in many instances mountains simply filled blank spaces. The great northwest, as yet unexplored, was often left blank on maps of the entire continent, but occasionally the area was taken up by the fabled “Inland Sea,” the long sought water route to the Pacific.

In the decade of the 1750s, however, several landmark maps appeared. In 1751 Joshua Fry and Peter Jefferson published the results of their surveys in the middle and southern colonies in “A Map of the Inhabited part of Virginia containing the whole Province of Maryland, Part of Pensilvania, New Jersey, and North Carolina . . .” Then in 1755 Lewis Evans’s “A General Map of the Middle British Colonies” and John Mitchell’s “A Map of the British and French Dominions in North America” were published, winning each man

almost instant acclaim. Evans's map proved so popular that it was pirated sixteen times before the turn of the century, and Mitchell's map, which is considered one of the most important documents in American history, was consulted by plenipotentiaries from both sides of the peace negotiations of 1782 and 1783. William DeBrahm followed Evans and Mitchell with his map of South Carolina and Georgia, a work that eventually gained him the appointment of Surveyor General of the Southern District of North America. There were also several important surveys in progress in the northern provinces in the 1750s, most notably in the St. Lawrence River Valley under the direction of Samuel Holland and J.F.W. Des Barres.

The reasons for the increased interest in North American geography and the tremendous improvement in the quality of maps of the eastern half of the continent are not hard to find. Once again Great Britain and France faced the prospect of war over their territorial claims in the New World. As in all such struggles, the demand for maps of the war zone increased. In the early 1750s this demand was met by copyists and propagandists. In France, for example, map publishers like Jean Baptiste Nolin and Maurille Antoine Moithey took advantage of the situation to produce maps that favored French claims and denoted the "pretentions des Anglois," and in England mapmakers like John Lodge, Robert Sayer, and Emanuel Bowen highlighted the "French Encroachments" in North America for the English-speaking world. The most outspoken anti-Gallicans, like William Hebert, even asserted that the boundaries shown on his map of North America were confirmed by charters and the formal surrender of England's "Indian friends."

Obviously, once the war was under way, there was a ready market in Great Britain and France for campaign maps, siege and battle maps, maps showing the entire theater of war, propaganda maps, and public information maps. And after the signing of the Treaty of Paris in 1763, the cry came for maps outlining the territorial settlements of both countries.

As for the improvements in the quality of

maps produced during this period, one has only to look at the new techniques employed by the leading surveyors. Des Barres explained his technique for charting American waters as follows:

"I measured a base of 350 fathoms along a plane on the western side of Exeter Harbour, and from its extreemities, having, with a theodolite, taken the angles of visual rays to objects placed on the opposite shore, which being calculated trigonometrically and protracted in their proper bearings, on paper fixed upon a plain table, I then repeated, with the plain table, the same operations over again, and intersected the same objects from the same extreemities of the base line, by which and other intersections, or series of triangles, I had the distance between an object placed on Point Bulkeley and another on Newton Head; from whence, by further intersections performed in the same manner, I determined the true emplacement of Winter's, Roger's and Barron's Islands, and of all the ledges; thence, repeating the former operations from all these islands, I found all the angles, and distances to agree with what I had layd down, from the above mentioned observations, before. From points as were most commodiously situated on those islands, and head lands, I observed the distance head lands, bays, islands, points, and other remarkable objects, as far as they could be distinguished. Next I went along shore, and reexamined the accuracy of every intersected object, delineated the true shape of every head land, island, point, bay, rock above water, etc., and every winding and irregularity of the coast; and with boats sent around the shoals, rocks and breakers, determined from observations on shore, their position and extent, as perfectly as I could. When the map of any part of the coast was compleated in this manner, I provided immediately each craft with copys of it: The sloop was employed in beating off and on, upon the coast, to the distance of ten and twelve miles in the offing, laying down the soundings in their proper bearings and distance, remarking every where the quality of the bottom. The shallop was, in the meantime, kept busy in sounding, and remarking around the headlands, islands, and

rocks in the offing; and the boats within the indraught, upwards, to the heads of bays, harbors, etc."

Des Barres, like numerous other British engineers and surveyors sent to America to assist in the war effort, had been trained in the latest surveying techniques, and unlike his predecessors, he was able to make precise measurements of vertical and horizontal angles with the theodolite, a relatively new instrument. The troublesome problem of determining longitude had also been solved with the invention of the chronometer about 1730.

British and French military engineers and surveyors produced many excellent maps and charts of North America and the West Indies during the French and Indian War, but the British held a decided advantage, in part because of their strategic position, and quickly surpassed the French in the production of new maps. Not only did France lose its supremacy in the area of sea charts, but its mapmakers in Paris were soon copying the works of London printers. The most notable cartographic work done during the war took place in Nova Scotia, the St. Lawrence River Valley, northern New York, the Carolinas, and parts of the West Indies. However, to the surprise of many, the most vigorous mapping effort of the century took place after the signing of the Treaty of Paris in 1763.

The French and Indian War had awakened the British government to the need for better maps of its North American empire, and with the advent of peace, a program was established for mapping the entire eastern seaboard. To accomplish this, the colonies were divided north and south at the Potomac River and a surveyor general appointed over each district. Samuel Holland won the appointment of surveyor general for the northern district and William DeBrahm for the southern district. An expedition was also sent to chart the course of the Mississippi River with a view to gaining access to the Gulf of Mexico for frontier traders. Extensive plans were even drawn for linking the Mississippi and Iberville rivers to bypass the Isle of

Orleans and reach the Gulf through Lake Pontchartrain, Britain's southern boundary. Additionally, the British Admiralty gave desultory support to a program for charting the St. Lawrence River, Nova Scotia, New Brunswick, and parts of New England.

These surveys produced remarkable results. Des Barres charted the entire coast of Nova Scotia and parts of New Brunswick and New England. His chart of Sable Island was two years in the making, but well worth the effort. In 1774 he returned to England to edit and publish his charts. Samuel Holland worked with teams of surveyors to produce maps of Prince Edward Island, Cape Breton, and the inhabited parts of Canada and New England. His name is also used in connection with maps of New York and New Jersey. As instructed, DeBrahm concentrated his efforts on the Florida peninsula south of St. Augustine. His were the first scientific surveys of the peninsula, which heretofore appeared on most maps of the area as a collection of narrow islands, and he produced the first printed map of the Gulf Stream.

The disturbances culminating in the war of American independence prevented Holland from completing his survey of the northern district of North America, but the information already acquired proved invaluable in Britain's war effort. So desperate was the British Navy for detailed surveys of the New England coast that Des Barres printed many of his charts before they were half finished. Some lacked titles and topographic features. Others were mere outlines of small sections of the coast. In an effort to extend the coverage of his atlas, Des Barres compiled and edited the surveys of Holland, DeBrahm, and others, but he eventually compromised the quality of his work by inserting siege and battle maps, some of which possessed little or no nautical value.

Most maps drawn during the war reflect the exigencies of the struggle. Occasionally, a campaign map will be found imposed on a carefully executed map from an earlier period, but the majority are technically poor. Among the maps drawn in America, the exceptions are the ones that were drawn over a period of weeks or months such as during a lengthy siege

or winter encampment. By far the worst examples are maps by Hessian and Spanish engineers. The material also reflects an imbalance in the events covered. For example, there are few good maps, manuscript or printed, of the battles of Cowpens, Camden, or Guilford Courthouse, whereas the sieges of Boston, Charleston, South Carolina, and Yorktown, Virginia, appear on numerous maps.

Despite the technical shortcomings of a large number of Revolutionary maps, the collection at the Library of Congress represents a pleasing variety of styles and types. There are maps of land and sea battles, reconnaissance maps, maps showing cantonments, lines of march, and lines of fire, public information maps, plans of forts and fortifications, and the usual campaign and siege maps. Some are commemorative maps approaching works of art, and others are offhand sketches. Still

others are documentaries of particular battles or skirmishes. In some cases the information provided is so extensive that one can trace the participation of an individual regiment or battalion throughout a campaign, and often the strategy of an entire campaign is visible at a glance. Surprisingly, several of the best and most original maps of the Revolution came from the hands of French engineers. Outstanding examples are Pierre Ozanne's pictorial maps of the battles of St. Lucia and Grenada and his vivid portrayal of the siege of Savannah. Few Revolutionary maps, British or American, can match the detail in the plan of march of Rochambeau's Army from Rhode Island to Yorktown, Virginia, and back.

After the Revolution the emphasis in mapping again shifted to the territorial settlements outlined in the treaty of peace. Only now, this meant the New United States.

Mitchell. Tho: Kitchin, sculp. [London] Sold by And: Miller [sic] 1755. col. map 136 x 195 cm. fold. in box 37 x 26 cm. Scale ca. 1:2,000,000.

G3300 1755 .M5 Vault Shelf

Mitchell's map is one of the most important cartographic documents in American history. Editions of the map were consulted by the official representatives of Great Britain and the United States during the peace negotiations of 1782 and 1783, and it has frequently been used in subsequent North American boundary disputes. It was published at least seven times in England, nine times in France, and twice in Holland and Italy.

The map covers the area from James Bay to the Gulf of Mexico and from the Atlantic coast to the Great Plains. It shows provinces, some

counties, numerous towns and cities, frontier settlements, forts, roads, distances between major towns, rivers and lakes, portages, waterfalls, Indian villages and tribal territory, English "Factories" among the Indians, mineral deposits, early routes of exploration, a few battlegrounds, and relief. Also shown are the fishing grounds in the North Atlantic and channels in the St. Lawrence River and the Great Lakes. The map includes numerous historical and descriptive notes, references to symbols, and the following inset: "A New Map of Hudson's Bay and Labrador from the late Surveys of those Coasts" (ca. 1:10,000,000). Annotated: numbers have been inserted in red ink over the entire map as an apparent key;

Campbell, Robert. A map of the great river St. John & water (the first ever published) from the Bay of Fundy, up to St. Anns of Frederick's Town; being little known by white people, until 1783; settled by the American Loyalists, then part of Nova Scotia, now called New Brunswick from an actual survey, made in the years 1784, 85, 86 and 87, by Robert Campbell, surveyor, Capt. of the 40th Company of St. John's Loyalists. S. I. Neele, sculpt. [London, 1787?] map 51 x 42 cm. Scale ca. 1:253,440; 4 miles to the in. G3432.S3 1787 .C3 Vault

Shows counties, townships, towns, trails, mills, land grants, names of numerous residents, taverns, a French village, Negro settlements, lots along the St. John River and connecting tributaries, islands and falls in the river, and relief. "The Falls in this River are justly ranked among the Curiosities of the World, they are at the Mouth of the River about one mile from the Entrance, and are navigable 4 times in 24 hours, which commands great attention as only a few Minutes are required to pass in safety. The Tide rising from 20 to 24 Feet at High-water is 6 or 8 Feet higher than the River, which occasions a Fall in the River as well as out, the whole Water of the Country having to pass between 2 Rocks 60 Yards distant." Inset: A Plan of the City of St. John "with references to streets, wards, and squares."

The imprint pasted on the chart has been altered by prefixing the words "Survey'd &," coast shoals and banks are stippled, the words "South Battery" at the east end of the town have been removed and reengraved in smaller letters farther to the left in abbreviated form, i.e., "Soth Battery," and the island below the battery labeled "Georges Id." Also, a heavy black line has been added at the top of the oval view of the lighthouse and four ships inserted, and the large panorama has been replaced by a view of the coast with thirty or more ships in the foreground. Views are colored. Imperfect: margins trimmed, eliminating the imprint.

The date of imprint has been advanced to January 30, 1779, and plate number "Pl. 37" engraved in the upper margin. The interior shading was darkened in the fourth state and the plan of Halifax almost removed. Here the plan of Halifax appears in expanded form, i.e., additional area and fortifications, and several roads and settlements have been added. Also, when the new panorama was added to the chart, three references below the panel were left untouched. Reference letters have now been prefixed to those explanatory notes. Number "20" pasted over the engraved plate number.

2d State. Chart of the southeast coast of Nova Scotia from Barrington Bay to Shag Harbor. Includes Cape Sable Island, Barrington Passage, and "Druid Bay." The town of Barrington is shown but unnamed, and there is a

small settlement on the west side of Barrington Bay. Coastal shoals, banks, and flats appear only in outline except on "Samuel Beach" and southeast of Cape Sable Island where they are stippled. Depth is shown in fathoms in navigable water and in feet on shoals and flats. Dotted lines identify the channels into Barrington Bay and Boneta Cove, and symbols are used to show the type bottom. A descriptive note follows the title, which does not appear on the first state of the chart. The orientation is with north to the right, but the figures for longitude and latitude read across the chart from south to north. Longitude is incorrectly given as 60° instead of 65° .

2d State. Shows extensive soundings, shoals, and sandbars on both ends of the island, and relief. Places named are Mount Luttrell, Gratia Hill, the Vale of Misery, Smith's Flagstaff, Rams-head, the Naked Sand Hills, and Mount Knight. Also shows a low sandy beach and the entrance to the "pond." State two is distinguished by a compass star at 43°47' north latitude to the left of the island, and the imprint, "Publish'd according to Act of Parliament by I. F. W. Des Barres Esqr.," in the lower margin.

The importance of this chart to eighteenth century navigators is described in the following extract from the introduction to *The Atlantic Neptune*: "The Northern Coasts and Harbours of His [Majesty's] American dominions were unexplored, and very partially and imperfectly known, and that only to a few fishermen. The Isle of Sable itself was a terror to all Navigators at large going to America, or returning thence to Europe, and shipwrecks were innumerable." Des Barres's atlas contains two charts of the island, five views of its east end, seven views of its west end, and a page of remarks.

The significance of Evan's map of the middle British colonies is discussed at length in Walter Klinefelter, "Lewis Evans and His Maps," *Transactions of the American Philosophical Society*, v. 61, pt. 7 (July, 1971). One of the landmarks in American cartography, the map appeared in at least 16 pirated editions before the turn of the century. It covers the area from Quebec to Cape Henry, and from Boston to the lower Ohio River, but it was most appreciated for its description of the Ohio Country. The map shows some provincial boundaries, a few counties and courthouses, towns and cities, numerous roads and trails, Indian villages and tribal territory, forts, swamps, mineral deposits, water communications, distances between towns and points of interest, early place-names, and relief. Also included are three distance charts, historical and descriptive notes, and the following inset: "A sketch of the remaining Part of Ohio R. &c." Inscribed to "Thomas Pownall, Esqr."

This issue of the Evans map, which is described by Klinefelter as "the only honest use ever made of Evans's work after his death," was printed in large part from the original plate engraved by James Turner at Philadelphia in 1755. It contains several corrections, additional detail, and an extension eastward to Passamaquoddy Bay by Thomas Pownall. The title now reads: "A Map of the Middle British Colonies in North America, First Published by Mr. Lewis Evans, of Philadelphia, in 1755; and since corrected and improved, as also extended, with the Addition of New England, and bordering Parts of Canada; from Actual Surveys now lying at the Board of Trade, By T. Manuscript, pen-and-ink and watercolor.

Key map of the route of march of Comte de Rochambeau's army from Providence, R. I., to Yorktown, Va., and the return march to Boston. The numbers designating camps correspond to those on maps of individual camps listed in this bibliography. The yellow line from Providence to Head of Elk and Annapolis, Md., and down Chesapeake Bay to Williamsburg and Yorktown (camps 1-40) shows the march south

from June 10 to September 30, 1781. The green line from "Scott's House" southward to Williamsburg shows the route of the supply train, and the red line from Lebanon, Conn., to Philipsburg, N.Y., represents the flanking march of Lauzun's Legion. Camps on the return march follow the green line from Williamsburg to "Spurrier's Tavern" and continue along the yellow line to Boston. Camps along the red line from Princeton, N. J., to King's Ferry represent the flanking march of Lauzun's Legion on the return march. Title from manuscript label on verso as originally mounted. The complete title as it appears on another version of the map reads as follows: "Carte générale des camps et marches des troupes francaises sous les ordres du Lieutenant General Comte de Rochambeau, de Rhode Island à York en Virginie, et des Camps occupés au retour de l'armée française de York à Boston: du 9 Juin 1781, au 1er. Shows bays and inlets, islands, rivers, shoals, and navigational hazards. The Kennebec and Androscoggin rivers and their tributaries extend a considerable distance inland, but information concerning the interior is limited to a few place-names, the locations of ponds, "Fort Halifax," "Nigumkick Rapids," and waterfront settlements. In this state of the chart the upper and lower borders have not been scaled, although each has one longitudinal figure—"69°45'." The side borders have been scaled and numbered at ten minute intervals from 43°10' to 44°00', the latter being an error for 44°10' (the preceding number is 43°60'). Items 925 through 929 comprise a series of plans of forts in Boston and vicinity, built or strengthened after the British evacuation. The plans are probably the work of Colonel Richard Gridley (1710-96), the first American chief of engineers, who was appointed to superintend the defense of Boston when the Americans regained control of the city. In a letter to Washington dated May 13, 1776, which was prompted by a reported lack of progress on the forts, Gridley explained, "Fort Hill & Dorchester point Forts, Charles Town Fort & the Fort on Noddles Island are now in a posture of Defence, with platforms Laid & Cannon Mounted on them, except Noddles Island which will soon be done; . . ." Gridley enclosed seven plans of forts in the Boston area in a second letter to Washington written on December 9, 1776. The above plans are thought to have been in the possession of Major General William Heath during the war.

Plan for a fortification to be built on the ruins of the British redoubt near Boston Neck on the road to Roxbury. On verso, partly illegible and in a different hand: "Boston . . . part of the . . . project for the war . . ." The plan is probably the work of Brigadier General Duportail, Washington's chief of engineers from 1777 to 1783. Duportail was sent to Boston to superintend the city's landward defenses following the British occupation of Newport, R. I. His report on the situation at Boston, which included a written plan of proposed fortifications throughout the area, is in the Washington Papers, Library of Congress.

Manuscript, pen-and-ink.

Fort Griswold, located on a hill 120 feet above the Thames River near the town of Groton, was the largest of three forts guarding the water approach to New London. The fort was described by one contemporary as "An

oblong square, with bastions at opposite angles, its longest side fronting the river in a N.W. and S.E. direction. Its walls were of stone, and were ten or twelve feet high on the lower side and surrounded by a ditch. On the wall were pickets, projecting over twelve feet; above this was a parapet with embrasures, and within a platform for the cannon, and a step to mount upon to shoot over the parapet with small arms." The above plan of the fort is in the style of Daniel Lyman (see item 1025). Shown are the disposition of British troops under Benedict Arnold during the diversionary raid on New London, September 6, 1781. References identify the main thrust of the attack, the spot where Major William Montgomery of the 40th Regiment of Foot fell mortally wounded, and magazines, barracks, and "guns yt. much annoyed ye. troops."

Manuscript, pen-and-ink and watercolor.

Shows the "Boundary-line between N. & S. Carolina Fixed and Marked in 1764," the territory of the "Cataba Nation," "Cataba Town," Old Town, part of the Catawba River and adjacent tributaries, roads to Charlotte and Camden, Kings Mountain, the "Boundary-line between N. & S. Carolina Fixed and Marked in 1772," parts of the Broad, Green, and "Pacolet" rivers, the Old Cherokee boundary, and relief. This map is probably a copy of the survey referred to by Governor Montagu in a letter to the Earl of Hillsborough, July 27, 1772: "Agreeable to his Majesty's Instructions I appointed Commissioners and Surveyors to run the Boundary Line between this Province and North Carolina. They met the Commissioners appointed by the Governor of North Carolina in the Month of May, and mark'd the Line agreeable [sic] to the King's Instructions. . . . The extent of the Line run is Sixty five miles; the Soil and general appearance is very fertile, producing luxuriantly Indigo, Hemp, Tobacco, and all English Grains; a great part of the Country is thickly settled, and upon a computation, it is suppos'd more than five thousand white inhabitants are added to this Province. I ordered the Line survey'd, to be accurately drawn out, and have transmitted it to you, by this conveyance. I must beg your Lordship will observe, that upon the exactest survey the course of Broad River, laid down in this Plan, entirely coincides with the account I gave your Lordship of it . . . and [is] not agreeable to the supposition of its course laid down in a Map sent your Lordship from North Carolina."

Jean-François-Louis, comte de Clermont-Crevecoeur, lieutenant of the Auxonne Regiment Royal Artillery, commented in his journal kept during the march north: "We crossed it [the Potomac River] in boats 8 miles beyond Alexandria where it was quite narrow, not over 1,000 to 1,200 yards wide, and went to camp across the river a mile above the village of Georgetown. This village is ugly, badly built, and poorly situated." Rice and Brown,

Drawn by Joshua Fry & Peter Jefferson in 1751. London, Thos. Jefferys [1755] col. map 77 x 124 cm. Scale ca. 1:650,000. G3880 1755 .F71 Am. 3-26.

Second edition, second impression. This impression of the Fry-Jefferson map contains numerous additions, such as roads, place-names, Hampshire County, the word "most" in the title, degree marks, and a distance chart by "J. Dalrymple, London Jany. ye 1st. 1755." There is a ten degree error in the degree marks (65°19' to 72°19' Longitude from London). For additional information on this and subsequent issues of the map see "The Fry & Jefferson Map of Virginia and Maryland: Facsimiles of the 1754 and 1794 Printings with an Index" (Charlottesville: The University Press of Virginia, 1966).

The map shows provincial boundaries, counties, towns, courthouses, glebes, plantations, names of numerous landowners, churches, taverns or ordinaries, forts, roads, a few mills, a school, rivers and creeks, bridges, ferries, mineral deposits, numerous place-names, and relief. Includes a few notes on the quality of land in the western part of the province. Inscribed: "To the Right Honourable, George Dunk Earl of Halifax . . ."

John Henry, father of the more famous Patrick Henry, published his map of Virginia largely to promote interest in the frontier counties where he was speculating in land. Unfortunately, the map did not attract much attention, partly because of the popularity of the Mitchell and Fry-Jefferson maps and the criticism of Thomas Pownall for what Pownall considered serious inaccuracies and omissions. The map is best known for the information it provides on county boundaries and the numerous names of plantations and landowners, but it also shows towns, courthouses, forts, a few industries, rivers and creeks, ferries, bridges, and relief, and includes notes on population, trade, agriculture, slaves, and social customs.

This is the first in a series of plans of the camps of Comte de Rochambeau's army during the march north from Williamsburg, Va., to Boston, July-December 1782. The soldiers marched in four divisions, each a day's march apart, consequently the camps shown were occupied for four or more nights. Most of the plans are oriented with north to the top. They are bound under the title *Amérique Campagne 1782: Plans des Differents Camps Occupés par l'Armée aux Ordres de Mr. le Comte de Rochambeau*. This volume once belonged to Rochambeau himself. It was purchased by the Library of Congress in 1883 and comprises part of the Rochambeau Collection. The entire set of plans is reproduced in Rice and Brown, *American Campaigns of Rochambeau's Army* (1972), v. 2.

Drinking Spring is near the present town of Norge, Va., about eight miles northwest of Williamsburg. Like most of the camps, the spot chosen was near a stream, which provided fresh water for men and horses.

When Rochambeau's wagon train passed through this area the preceding year, one of his

officers made the following observations: "Hanover town, a small town on the south bank of the Pamunkey, has suffered war damage. Cornwallis had the fine warehouses burned, as well as several private houses whose owners were suspected of devotion to the cause of independence. There was once a bridge, which now is broken." His Majesty's Superintendant of Indian Affairs. By William Faden successor to the late T. Jefferys, geographer to the King. London, 1780." The deficiencies of De Brahm's map have been somewhat remedied by Faden with the addition of roads, trails, rivers and creeks, bridges, ferries, settlements, forts, churches, waterfalls, battle sites, names of landowners, and place-names, particularly in the interior parts of the state. Despite the 23-year interval between the two states and the obvious changes in land ownership created by the Revolution, the lists of proprietors has not changed.

Plan of the siege of Charleston from March 30, 1780, the day after the British moved onto Charleston Neck, through the American surrender on May 12. Shows British headquarters, encampments, parallels, troop positions, and batteries, and the American lines of defense. Also shows the city of Charleston, wharves, roads, outlying plantations, names of a few landowners, and soundings and shoals in the harbor. Both the British and American

fleets are shown pictorially. Includes a descriptive index and the following note: "Charestown [sic] having surrendered by Capitulation the 12th. May the Garrison laid down their Arms at [point] Z. between the Abbattis, in front of the Hornwork."

Word of the British victory at Charleston, S. C., reached England on June 15, 1780 (*London Daily Advertiser*, Friday, June 16, 1780). Two days later Des Barres published this plan of the events of the siege with the latest information hurriedly engraved on a previously prepared plate. The misspelling of Charleston in the above note and a blank space on the plan apparently left for the date Clinton took possession of Lem-priere's Point attest to the haste with which it was printed.

Crudely drawn but detailed map of the siege of Charleston. Shows the disposition of British and Hessian regiments, batteries, fields of fire, entrenchments, the passage of the British fleet into the harbor under fire from Fort Moultrie, and American ships, barracks, and a hospital. The sketch of Charleston indicates that the cartographer, who was probably a Hessian officer, was only vaguely familiar with the city and possessed little information on the location of American defenses. A unique feature of the map is the identification of several Negro camps near the British commissary and the 1st Battalion of Light Infantry. Probably the Negroes were slaves hired out by their loyalist masters to General Clinton to drain ditches, dig

parallels, move cannons, and haul rowboats overland. On verso: "Siege of Charles Town, South Carolina. Lieut. Finnegan, 16th Regt." Oriented with north to the right. The map is similar in style to item 1578.

Covers the course of the siege of Charleston from February 11, 1780, when the British landed at North Edisto Inlet, to March 29, 1780, when they crossed the Ashley River. Shows the line of march across James Island, the disposition of Clinton's troops prior to crossing the river, British transports in the Stono River, a battery near the Ashley River, British headquarters, American fortifications on Sullivan's Island, including Fort Moultrie, ships in the channel, and defensive posts on Long Island and Mount Pleasant. Also shows plantations, names of some landowners, roads, waterways, shoals, channels, and soundings. The British navy is shown pictorially at anchor at Five Fathom Hole, where it remained from March 20 to April 8. The map was probably drawn between March 20 and March 29 while the navy was at Five Fathom Hole and before General Clinton moved onto Charleston Neck. It was drawn for the *Atlantic Neptune*, but it does not carry Des Barres' name. It is considered "excessively rare." See Stevens, *Catalogue*. p. 320.

The place of the capitulation and the pictorial representation of British supplies being ferried across the river are not shown. Evidence suggests that the parallels originally corresponded to the Des Barres map but were subsequently erased and redrawn. Also, the speed with which Des Barres' version was printed, the correction in the shape of the parallels, and the many similarities between the two maps, both of which were owned by Faden, suggest that the manuscript was made after the printed map, perhaps as a prototype for a map of the siege that Faden planned to publish. Manuscript, pen-and-ink and watercolor.

Hessian map of Charleston drawn a few months before the British evacuation in December 1782. Shows changes made in the area's defenses during the British occupation, including Fort Arbuthnot (formerly Fort Moultrie) in ruins, a new fort on Sullivan's Island also called Fort Arbuthnot, an encampment on James Island, a guardhouse, and entrenchments and batteries. Also shows roads, the lighthouse, shoals, and soundings. Includes an "Explication."

De Brahm, John Gerar William. A map of Savannah River beginning at Stone-Bluff, or Nexttobethell, which continueth to the sea; also, the four sounds Savañah, [Warsaw], Hossabaw, and St. Katharines, with their islands; likewise Neuport, or Serpent River, from its mouth to Benjehova Bluff. Surveyed by William Noble of Brahm, late captain ingenier under His Imperial Majesty Charles the VII. [1752?] col. map 65 x 136 cm. Scale ca. 1:132,000. G3922.S3 1752 .D4 Faden 45

Manuscript, pen-and-ink and watercolor.

Carefully drawn map of the Savannah River. Shows banks, ponds, swamps, marshes, bluffs, and hills, oak and pine forests, part of St. Catherine's Island, including the home of Thomas Bosomworth, the lighthouse on Tybee Island, the town of Savannah, and the Bethesda orphanage. Also shows the towns of Old Ebenezer, New Ebenezer, Abercorn, and Purrysburg, roads in the area, Indian towns, storage houses, and lands, and names of numerous landowners—Henry Parker, Jonathan Bryan, "Capt. Mackay," "Dr. Graham," and others. Annotated with brown ink. Oriented with north to the right.

Although De Brahm did not arrive in Georgia until the summer of 1751, he completed this map by March 1752 and submitted it to the trustees of the colony with the following appeal: "I think it my Duty to represent to the Honorable Trustees my good Intentions of contributing my Service to the Benefit of this Province; and do by this Conveyance present their Honours with a Map of that part of Georgia, which I have had an opportunity of Surveying Since my arrival here; and which I flatter myself will speak in my Behalf, and be more Satisfactory and agreeable than any thing I could say in a long and tedious Letter—therefore have only to add my humble request—that the Honble Trustees would be pleased to Conferr any office or Employment, that they in their great Wisdom may think me sufficiently qualified for, as I can assure their Honours, that I shall not be Deficient in my Integrity and Industry in the Execution thereof..." In 1754 De Brahm was named one of the colony's surveyors and later became Surveyor General of the Southern District. See Allen D. Candler, *The Colonial Records of the State of Georgia*, XXVI [Charles P. Byrd, State Printer, Atlanta, Ga.], 1916, p. 347-48, and Louis De Vorsey, ed., *De Brahm's Report of the General Survey in the Southern District of North America* (University of South Carolina Press, Columbia, S. C.), p. 9-10, 14-15.

Campbell, Archibald, Sir. Sketch of the northern frontiers of Georgia, extending from the mouth of the River Savannah to the town of Augusta, by Archibald Campbell. Engraved by Willm. Faden, 1780. London, Wm. Faden, 1780. map 70 x 60 cm. Scale ca. 1:110,000.

G3922.S3 1780 .C3 Vault

Primarily a map of the Savannah River between the Atlantic coast and Augusta. Also shows Midway River, Great Ogeechee River, and towns, plantations, roads, ferries, and creeks in the area. Includes two insets of "Continuation of Savanna River, from Ebenezer to Augusta" and an index of "References to the attack of Savannah on the 28th December 1778." The date is probably a printer's error since it was one day before Archibald Campbell, the author of the map, actually captured the town. Distances between points along the road to Augusta probably were determined by Campbell as he marched first to Ebenezer, then to Augusta. Annotated: "33" on verso. Oriented with north to the upper right.

Manuscript, pen-and-ink and watercolor.

Cadastral map. Shows the town later known as Hardwick with numbered town lots and areas set aside for public use such as markets, squares, churches, and fortifications. The township covered 500 acres on the south side of the Great Ogeechee River about 14 miles from its mouth. Both Governor John Reynolds and Governor Henry Ellis tried unsuccessfully to move the colony's capital from Savannah to Hardwick. The town never flourished and eventually passed out of existence. Yonge, who laid out the town, was one of two surveyors for the colony of Georgia in 1754. Includes descriptive text. Imperfect: margins torn. Oriented with north to the bottom.

Covers the portion of the Augusta road between Ebenezer and Augusta traveled by Sir Archibald Campbell's troops, January 24-31, 1779. Shows towns, creeks, swamps, ferries, bridges, and other landmarks, and distances

between various points along the road. An anonymous manuscript text accompanying the map describes Campbell's activities after the taking of Savannah and his belief that a sizeable number of Loyalists would join him upon his arrival at Augusta. Also includes a table of distances between Savannah and Augusta for both the water and land routes. Title in part from accompanying manuscript text.

Item 1577. The failure of the combined forces of General Benjamin Lincoln and Comte d'Estaing to capture Savannah in October 1779 undermined the confidence of many American patriots in the French alliance. Pierre Ozanne's pictorial map of the siege was drawn on the scene.

Manuscript, pen-and-ink and watercolor.

Shows British, French, and American troop positions, fortifications, camps, lines of march, and lines of fire. Also shows batteries, with the number and size guns in each work, British, French, and American ships in the river, vessels sunk in the river, a magazine, and storehouses, and plantations, rice fields, and woods in the surrounding area. Buildings and ships are shown pictorially. The site of the major assault on October 9, 1779, is identified. "McGelbery House" probably refers to Lacklan McGillivray's plantation Royal Vale, later one of the most valuable confiscated loyalist properties in Georgia. The style and word usage of the plan suggested that it was the work of a Hessian officer.

Unfinished. The fortifications surrounding the town seem to combine the works used in the siege of 1779 with the new defensive line which began on the down river side of Savannah with Fort Prevost and protected the town on the landward side. Parts of the line are dotted, perhaps indicating the transition from the old to the new defensive system. Fort Prevost is incorrectly drawn, making it difficult to determine whether the plan was made before or after the 1782 addition to the fort. Covers the area of the present state of Mississippi, southeastern Louisiana, and Mobile Bay. Shows Indian villages, the Mississippi River and connecting tributaries, "Fort des natches," "Fort et Ville de la Mobile," "Fort St. Louis," settlements, and early place-names. A line extending from the "Village des Chitkaches" bears the following note: "This line being proposed to be the eastern boundary of the new collony is supposed to run paralld to the R. Mississippi and to continue in this direction till it strikes on the R. Ohio." A second note on the map reflects the British interest in deepening the Iberville River to establish an outlet to the Gulf of Mexico north of the Isle of Orleans: "There is 6 feet water in all seasons of the year from the Bay of Mexico thro' the lakes Ponchartrin and Maurepas into the River Iberville as far as the pricked line extends from thence thro' the Iberville being about 20 miles to the Mississippi there is 5 or 6 feet water for about 4 or 5 months in the year the rest of the year it is dry but it is immagin'd that by a trifleing expence the waters of the Mississippi might be turned thro' that channell and thereby render the navigation good at all seasons in the year."

The title has been expanded and moved from the upper right corner to the lower right corner: "Antigua, Surveyed by Robert Baker, Surveyor General of that Island: Engraved and Improved by Thomas Jefferys, Geographer to the King." Many place-names have been reengraved and new ones added, depth along the coast is now shown by form lines, relief shading has been added, and shoals and reefs have been stippled. Other changes include the addition of anchorages, a plan of the town of Saint Johns, a list of parishes with the number of acres in each parish, and an inset of English Harbor showing more fortifications, roads, anchorages, careening places, cisterns, and

storehouses. Colored. Imperfect: margins trimmed, removing a profile of the island from "Bearing N.W. 6 Leagues distant." The profile can be seen on the following copies.

The bay is described in the "Remarks" as "every where bold & sufficient to contain any Number of Ships, it is quite open to Westerly Winds which are very Moderate except in the Hurricane Season at which Time it is not safe lying here. The Town is elegant airy & comodious, the Churches & most of the Houses in the principal Streets built with hewn Stone & a Stream of Water runs thro' most of the Streets. The Trade of this Place is very great, as not only that of this but of the Adjacent Islands all Centers at this Place. The Yearly Exports from hence is said to be about Forty Thousand Hogsheads of Sugar besides Coffee, Coacoa, Cotton &c. and there is seldom less in Crop Time than an Hundred sail of Vessels lying in the Bay. There is good Landing in any part of the Bay, and the Town is quite Comanded by the Heights behind it and may with little difficulty be destroy'd with Bomb Vessels from the South part of the Bay as most of the Batterys that Way may be silenced by the Large Ships of War. The Watering place is very convenient as the Water runs by a Spout into the Boat, at the price 1 Livre pr. Ton." Oriented with north to the upper left. "Hydrographical Office" stamped on the map.

Index

This index covers chiefly personal names, place-names, and terms that appear in map titles and annotations in the guide. A few subjects of special interest such as slavery and landownership have been included, but in general no effort has been made to index all of the information available on the face of individual maps. Persons seeking information on the American Revolution should consult maps according to the area and date of specific battles or campaigns.
